Directional controls

Introduction

This section gives the basic specifications for the complete line of Eaton's Integrated Hydraulics threaded cartridge non-solenoid directional control valves. Its purpose is to provide a quick, convenient reference tool when choosing Vickers cartridge valves or designing a system using these components.

Two pressure ratings are shown for all products featured in this catalog – typical application pressure and fatigue pressure. The typical application pressure rating is the maximum recommended operating pressure for the valve in a given system. The fatigue pressure rating is the pressure for the valve to be free for infinite life from metal fatigue.

Features and benefits

- Products in this catalog have been fatigue tested for one million cycles at 132% or 10 million cycles at 115% of rated pressure.
- All operating parts are hardened steel, ground and honed for long life and low leakage.
- Designed for maximum flexibility and minimal space requirements.
- All exposed cartridge surfaces are zinc dichromate plated to resist corrosion.
- All aluminum manifolds are gold anodized to resist corrosion.
- Desired settings may be locked down.
- Aluminum knob and cap options are available on some models.
- Reliable, economical and compact.

Warning

For pressure over 210 bar (3000 psi) use steel housing.

Description

This is a 3 way 2 or 3 position manual semi-rotary directional control valve. Can be used as a diverter or a dump valve.

Operation

This valve will direct flow between ports 1 and 3 and block port 2 in one position.

By turning the operator 90°, flow will be directed between ports 1 and 2 and port 3 will be blocked. During cross-over transition, all ports are blocked.

Features

Hardened, ground and honed working parts to limit leakage and prolong life. Various levers and knobs available with and without detent.

Description

This is a high pressure 3 way 2 or 3 position manual semi-rotary directional control valve. Can be used as a diverter or a dump valve.

Operation

This valve will direct flow between ports 1 and 3 and block port 2 in one position.

By turning the operator 90°, flow will be directed between ports 1 and 2 and port 3 will be blocked. During cross-over transition, all ports are blocked.

Features

Hardened, ground and honed working parts to limit leakage and prolong life. Various levers and knobs available with and without detent. Working pressure 350 bar.

Performance data

Ratings and specifications

Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)

3 position models

Operation

This valve will direct flow between ports 1 and 2 and ports 3 and 4 in one position.

By turning the operator 90°, flow will be directed between ports 1 and 4 and port 3 to port 2. During the cross-over transition, ports 2 and 4 are blocked and ports 1 and 3 are connected.

Features

Hardened, ground and honed working parts to limit leakage and prolong life. Various levers and knobs available with and without detent.

MRV6-16 - Manual rotary valve

Manual semi-rotary directional control valve
11 L/min (3 USgpm) • 350 bar (3000 psi)

3 position models

Operation

This valve will direct flow between ports 1 and 2 and ports 3 and 4 in one position.

By turning the operator 90°, flow will be directed between ports 1 and 4 and port 3 to 2. During the cross-over transition all ports 1, 3 and 4 are open to each other and port 2 is blocked.

Features

Hardened, ground and honed working parts to limit leakage and prolong life. Various levers and knobs available with and without detent.

3CP2 - Series check valve

Check, manually operated

5.5-15 L/min (1.5-4 USgpm) • 210 bar (3000 psi)

Sectional view

Operation

The poppet seals flow from ports 1 to 2, depressing the hand knob lifts the poppet from its seat permitting flow the flow rate is determined by the size of the orifice and the pressure in the system, various orifice sizes are available.

Flow from port 2 to 1 should be avoided - if required please consult our technical department.

Features

Cartridge design with machined seats and precision ground balls gives excellent flow reseal characteristics.

MSV1-12 - Manual push valve

Push and twist directional control valve

41.8 L/min (11 USgpm) • 210 bar (3000 psi)

Operation

In the normal position, the valve allows flow from port 1 to port 2 while port 3 is blocked. In the actuated position, flow is allowed from port 3 to port 1 while port 2 is blocked.

Features

Hardened, ground and honed sleeve and spool for low internal leakage. Detent allows valve to be fixed in position

MSV4-12 - Manual push valve

Push and twist, normally open, directional control valve

53,2 L/min (14 USgpm) • 210 bar (3000 psi)

Operation

In the normal position, flow is allowed from port 3 to port 4 and from port 2 to port 1. In the actuated position, all ports are blocked.

Features

Hardened, ground and honed sleeve and spool for low internal leakage. Detent allows valve to be fixed in position

Sectional view

Description

This valve is a manually operated push and twist to switch, normally open 2 position 4 ported directional valve. This is ideal for isolating an actuator.

1SB10 - Brake sequence valve

Brake sequence directional valve

10 L/min (2.5 USgpm) • 350 bar (5000 psi)

Operation

When the pressure in the inlet line is below the switching pressure (15 bar), the outlet will be connected to the tank, the spool being held in place by the spring force.

When the pressure in the inlet line exceeds the switching pressure, the spool will slide back, opening inlet to outlet.

Features

Cartridge design enabling speedy servicing when mounted in a body or in a composite manifold.

Description

This valve provides a bias so that a predetermined pressure (15 bar) has to be reached before the valve will switch. In a typical brake circuit the brake will be held on until system pressure reaches the bias pressure. Once this pressure has been reached the valve will switch and supply pressure to the brake to hold it off. If the pressure then falls below the bias pressure the valve will again switch, applying the brake in a controlled manner.

Operation

When pressure in the inlet exceeds the set pressure, flow is allowed from inlet to outlet closing off the tank line.

When the inlet pressure is removed, the spool returns to its normal position, opening the outlet port to tank and closing the inlet port.

Features

Description

This valve provides a means of supplying oil to the outlet from the inlet when a pre-set pressure is reached. On removal of this pressure, inlet closes opening outlet to tank. Ideal for use in braking systems where a pressure is required in the main system before the brake is removed.

1RDS702 - Pilot to shift valve

Pilot to shift directional valve
80 L/min (20 USgpm) • 420 bar (6090 psi)

Sectional view

Description

This valve provides a means of interrupting a pressure line when a predetermined pilot pressure is reached in a normally open or normally closed form.

The valve can be used in any pilot or small flow system as a remotely operated sequence valve.

Operation

When a pre-set pilot pressure is reached the spool moves back against the spring either opening or closing the line between inlet and outlet.

When the pilot pressure falls the valve will return to its normal position.

Features

Cartridge design enabling speedy servicing when mounted in a body or in a composite manifold.

Operation

This valve allows flow between ports 2 and 3 while blocking port 4 until sufficient pressure has been applied to port 1 and the spring bias is overcome.

At this time, flow is directed between port 3 and port 4 while blocking port 2. During the cross-over transition, all ports are blocked. The spring chamber for this valve is externally vented to atmosphere.

Features

Hardened, ground and honed sleeve and spool for low internal leakage.

PTS13-10 - Pilot to shift valve

Pilot operated, directional control valve
30 L/min (8 USgpm) • 350 bar (5000 psi)

Operation

This valve allows flow between ports 3 and 4 while blocking port 2 until sufficient pressure has been applied to port 1 and the spring bias is overcome.

At this time, flow is directed between port 2 and port 3 while blocking port 4. During the cross-over transition, all ports are blocked. The spring chamber for this valve is vented to port 4.

Features

Hardened, ground and honed sleeve and spool for low internal leakage. Working pressure 350 bar.

PTS5-10 - Pilot to shift valve

Pilot operated, directional control valve

11 L/min (3 USgpm) • 210 bar (3000 psi)

Operation

This valve allows flow between ports 1 and 2 while blocking port 3 until sufficient pressure has been applied to port 4 and the spring bias is overcome.

At this time, flow is directed between port 2 and port 3 while blocking port 1. During the cross-over transition, all ports are blocked. The spring chamber for this valve is vented to port 1.

Features

Hardened, ground and honed sleeve and spool for low internal leakage.

PTS9-12 - Pilot to shift valve

Pilot operated, directional control valve

76 L/min (20 USgpm) • 280 bar (4000 psi)

Operation

This valve allows flow between ports 3 and 4 while blocking port 2 until sufficient pressure has been applied to port 1 and the spring bias is overcome.

At that time flow is directed between ports 3 and 2 while blocking port 4. During the cross-over transition, all ports are open. The spring chamber for this valve is vented to port 5.

Features

Hardened, ground and honed sleeve and spool for low internal leakage.

Description

The DSV4-16 is a 3-way, 3 position, spring centered, open or closed center spool, transmission shuttle, screw-in cartridge valve. Usually built into a customized housing along with other transmission components, see "Functional Symbols." The valve should be installed in a Blind C-10-4 cavity or in a standard housing with port 1 plugged.

Operation

When the spring bias is overcome at port 2, the flow is directed from port 4 to port 3 while closing port 2. When the spring bias is overcome at port 4, the flow is directed from port 2 to port 3 while closing port 4. This valve is available in both a closed and open center spool configuration.

Warning

Aluminum housings can be used for pressures up to 210 bar (3000 psi). Steel housings must be used for operating pressures above 210 bar (3000 psi).

PTS16-12 - Pilot to shift valve

Pilot operated, directional control valve

76 L/min (20 USgpm) • 350 bar (5000 psi)

Operation

This valve allows flow between ports 1 and 2 and ports 3 and 4 until sufficient pressure has been applied at port 5 and the spring bias is overcome. At that time, flow is

directed between ports 1 and 4 and ports 3 and 2. During the cross-over transition, all ports are blocked. The spring chamber for this valve is vented internally to port 1.

Features

Hardened, ground and honed sleeve and spool for low internal leakage. Working pressure 350 bar.

Sectional view

Description

This is a 4-way, 2 position, remotely pilot operated directional control valve ideal for reversing a function when the pilot pressure is applied or lost.

Performance data

Ratings and specifications

Performance data is typical with fluid at 21,8 cST (105 SUS) and 49°C (120°F)

Typical application pressure (all ports)	350 bar (5000 psi)
Cartridge fatigue pressure (infinite life)	350 bar (5000 psi)
Rated flow	76 L/min (20 USgpm)
Internal leakage	210 cc/min (13 in ³ /min) @ 350 bar (5000 psi)
Temperature range	-40° to 120°C (-40° to 248°F)
Pilot pressures	3,4 bar (50 psi)
Pilot displacement volume	1,97 cm ³ (0.12 in ³)
Cavity	C-I2-4
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Standard housing materials	Aluminum or Steel
Weight cartridge only	0.32 kg (0.70 lbs)
Seal kit	02-160979 (Buna-N), 02-160980 (Viton®)
